P/V is a calculation that compares the prices of the stocks in a portfolio to Southeastern's appraisal of their intrinsic values. P/V does not guarantee future results, and we caution investors not to give this calculation undue weight.

Returns reflect reinvested capital gains and dividends but not the deduction of taxes an investor would pay on distributions or share redemptions. Performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by visiting southeasternasset.com.

Before investing in any Longleaf Partners Fund, you should carefully consider the Fund's investment objectives, risks, charges, and expenses. For a current Prospectus and Summary Prospectus, which contain this and other important information, visit southeasternasset.com/account-resources. Please read the Prospectus and Summary Prospectus carefully before investing.

RISKS - The Fund is subject to stock market risk, meaning stocks in the Fund may fluctuate in response to developments at individual companies or due to general market and economic conditions. Also, because the Fund generally invests in 15 to 25 companies, share value could fluctuate more than if a greater number of securities were held. Investing in non-US securities may entail risk due to non-US economic and political developments, exposure to non-US currencies, and different accounting and financial standards. These risks may be higher when investing in emerging markets.

The MSCI World Index captures large and mid-cap representation across 23 Developed Markets countries, and covers approximately 85% of the free float-adjusted market capitalization in each country. The MSCI World Value Index is a subset of the MSCI World Index exhibiting overall value style characteristics using three variables: book value to price, 12-month forward earnings to price and dividend yield. The indexes are unmanaged, include reinvested dividends net of foreign withholding tax, do not reflect the deduction of fees or expenses, and cannot be invested in directly.
